

# Evans works with Universal Pictures on the latest release of the Fast and Furious franchise, Furious 7.

Calgary, AB: Calgary-based Evans, the world leader in designing and manufacturing 24/7 mission critical control room solutions, was asked to design the control room consoles for the FBI Headquarters to be seen in the upcoming *Fast & Furious* sequel, *Furious 7*, by Universal Pictures. The state-of-the-art workstation consoles deliver a modern authenticity to the film while complementing the sleek and stylish overall look of the movie.

The *Fast & Furious* series of movies have always been based in reality, albeit a hyper-cool version of reality. When Universal started developing the seventh movie in the franchise, they turned to Evans to design a modern and stylish control room console.

Evans' control room solutions are more than just an attractive set piece; they are designed to solve the logistical problems that 24/7 mission critical environments offer, from multi-user adaptability to 24/7 ergonomic comfort and durability. Their control rooms can be found around the world in 9-1-1

emergency dispatch centers, air traffic control towers, and real-life government facilities... not just fictional places where international car-racing rings are broken-up. With products featured in several upcoming feature films, including *Jurassic World* and *Furious 7*, Evans is quickly becoming Hollywood's choice for innovative and authentic control room environments.

The seventh installment of the *Fast & Furious* franchise sees the crew returning to the United States in the hopes of living normal lives again, but a new threat arises when Ian Shaw (played by Jason Statham), seeks revenge for the death of his brother, putting the entire crew in danger once more. James Wan directs the much anticipated seventh installment that also stars Vin Diesel, Paul Walker and Dwayne Johnson. *Furious 7* opens on April 3<sup>rd</sup>, 2015.

**Evans:** Evans Consoles Corporation is the world leader in designing and equipping mission critical operations with solutions that range from consoles to complete control room modernizations. Founded in 1980, Evans Consoles Corporation now employs more than 300 team members and exports 95 percent of its products, primarily to Fortune 500 companies and government organizations.
