

ALARIS Tower

EVANS
DESIGNS & EQUIPS MISSION CRITICAL OPERATIONS

THE ULTIMATE CONTROL TOWER SOLUTION

The Sky's the Limit

Based on direct feedback from Aviation Agencies and ATC front line experts, EVANS has specifically designed Alaris for the demands of the ATC Tower. Perfect for a new or modernized project, the aluminum structure of the console provides the durability required for 24/7 operations. Its innovative design, flexibility, and unique range of ATC features surpass the Air Traffic Control community's highest expectations.

An Ideal Ergonomic Solution

Sit-Stand Functionality

An ideal ergonomic solution featuring sit-stand technology allowing the operator full access to their equipment from a sitting or standing position.

Low Profile

The latest in console design featuring improved operator sight lines with maximum utilization of Cab footprint. The console features flexible mounting options with ease of future reconfiguration of ATC equipment.

Variable Mounting Console

A conventional console with a flexible modular equipment mounting system (Slatwall). Equipment can be easily mounted and then quickly reconfigured, replaced or updated without impact to the console structure.

ALARIS Tower
